

## De-bonding Sleeve

Designed to be placed onto Movement Ties, the Grayson De-bonding Sleeve is located over the embedment detail to allow the tie to move.

When used in conjunction with a wall tie or frame cramp, it can facilitate in-axis movement of up to +/- 10mm.

### Product Description:

The Grayson De-bonding Sleeve is designed to allow movement at specific points on a building, often accompanied by an expansion joint.

These sleeves are specifically designed to work with our:

- Plain-Ended Wall Ties
- Universal Frame Cramps
- 2000 Range Cavity Wall Ties (200mm and 225mm lengths)

The intuitive design allows the installer to fit the sleeve at the correct depth to allow for adequate movement and restraint. This is achieved by a viewing window in the body of the sleeve.

### Technical Specifications:

<b>Material:</b>	Hardened plastic
<b>Colour:</b>	Green
<b>Size:</b>	23mm x 100mm
<b>Part Numbers:</b>	DBS/100
<b>Quantity:</b>	250
