

Grayson Standard Reveal Plate

The Grayson Reveal Plate is designed to support the lower course of brickwork on a window reveal.

Grayson Standard Reveal Plate:

The 304 Grade Stainless Steel plate is laid on a bed of mortar, with bricks placed on top of the main section. This gives the system the required strength to then place the reveal brick upon the angle and the projecting part of the plate. Once the first course of brickwork is in place, the remaining brickwork can be constructed as usual.

Grayson provides standard reveal plates with depths of 215mm and 327.5mm, Bespoke manufactured reveal plates to for site-specific dimensions can also be offered.

Technical Specifications:

Material:	304 Stainless Steel
Part Number:	RPG/250
Part Number:	RP/475
